### Linear Regression Report

Dataset                   Untitled  
Y = Cohesion   X = no\_of\_Issues

#### Run Summary Section

---

Parameter	Value	Parameter	Value
Dependent Variable	Cohesion	Rows Processed	10
Independent Variable	no_of_Issues	Rows Used in Estimation	10
Frequency Variable	None	Rows with X Missing	0
Weight Variable	None	Rows with Freq Missing	0
Intercept	-1896.8554	Rows Prediction Only	0
Slope	1.1102	Sum of Frequencies	10
R-Squared	0.9443	Sum of Weights	10.0000
Correlation	0.9718	Coefficient of Variation	0.0418
Mean Square Error	26637.15	Square Root of MSE	163.2089

#### Summary Statement

---

The equation of the straight line relating Cohesion and no\_of\_Issues is estimated as: Cohesion =  $(-1896.8554) + (1.1102) \text{ no\_of\_Issues}$  using the 10 observations in this dataset. The y-intercept, the estimated value of Cohesion when no\_of\_Issues is zero, is -1896.8554 with a standard error of 500.7339. The slope, the estimated change in Cohesion per unit change in no\_of\_Issues, is 1.1102 with a standard error of 0.0953. The value of R-Squared, the proportion of the variation in Cohesion that can be accounted for by variation in no\_of\_Issues, is 0.9443. The correlation between Cohesion and no\_of\_Issues is 0.9718.

A significance test that the slope is zero resulted in a t-value of 11.6465. The significance level of this t-test is 0.0000. Since  $0.0000 < 0.0500$ , the hypothesis that the slope is zero is rejected.

The estimated slope is 1.1102. The lower limit of the 95% confidence interval for the slope is 0.8904 and the upper limit is 1.3301. The estimated intercept is -1896.8554. The lower limit of the 95% confidence interval for the intercept is -3051.5499 and the upper limit is -742.1610.

Dataset                  Untitled  
 Y = Cohesion    X = no\_of\_Issues

#### Regression Estimation Section

---

Parameter	Intercept B(0)	Slope B(1)
Regression Coefficients	-1896.8554	1.1102
Lower 95% Confidence Limit	-3051.5499	0.8904
Upper 95% Confidence Limit	-742.1610	1.3301
Standard Error	500.7339	0.0953
Standardized Coefficient	0.0000	0.9718
T Value	-3.7882	11.6465
Prob Level (T Test)	0.0053	0.0000
Reject H0 (Alpha = 0.0500)	Yes	Yes
Power (Alpha = 0.0500)	0.9109	1.0000
Regression of Y on X	-1896.8554	1.1102
Inverse Regression from X on Y	-2238.9774	1.1757
Orthogonal Regression of Y and X	-2088.4844	1.1469

#### Notes:

The above report shows the least-squares estimates of the intercept and slope followed by the corresponding standard errors, confidence intervals, and hypothesis tests. Note that these results are based on several assumptions that should be validated before they are used.

#### Estimated Model

$(-1896.85543982452) + (1.1102349257052) * (\text{no\_of\_Issues})$

#### Correlation and R-Squared Section

---

Parameter	Pearson Correlation Coefficient	R-Squared	Spearman Rank Correlation Coefficient
Estimated Value	0.9718	0.9443	1.0000
Lower 95% Conf. Limit (r dist'n)	0.8701		
Upper 95% Conf. Limit (r dist'n)	0.9922		
Lower 95% Conf. Limit (Fisher's z)	0.8814		1.0000
Upper 95% Conf. Limit (Fisher's z)	0.9935		1.0000
Adjusted (Rbar)		0.9373	
T-Value for H0: Rho = 0	11.6465	11.6465	
Prob Level for H0: Rho = 0	0.0000	0.0000	0.0000

#### Notes:

The confidence interval for the Pearson correlation assumes that X and Y follow the bivariate normal distribution. This is a different assumption from linear regression which assumes that X is fixed and Y is normally distributed.

Two confidence intervals are given. The first is based on the exact distribution of Pearson's correlation. The second is based on Fisher's z transformation which approximates the exact distribution using the normal distribution. Why are both provided? Because most books only mention Fisher's approximate method, it will often be needed to do homework. However, the exact methods should be used whenever possible.

The confidence limits can be used to test hypotheses about the correlation. To test the hypothesis that rho is a specific value, say  $r_0$ , check to see if  $r_0$  is between the confidence limits. If it is, the null hypothesis that  $\rho = r_0$  is not rejected. If  $r_0$  is outside the limits, the null hypothesis is rejected.

Spearman's Rank correlation is calculated by replacing the original data with their ranks. This correlation is used when some of the assumptions may be invalid.

#### Tests of Assumptions Section

---

Assumption/Test	Test Value	Prob Level	Is the Assumption Reasonable at the 0.2000 Level of Significance?
<b>Residuals follow Normal Distribution?</b>			
Shapiro Wilk	0.9390	0.541713	Yes
Anderson Darling	0.3588	0.451425	Yes
D'Agostino Skewness	-0.0415	0.966903	Yes
D'Agostino Kurtosis	0.4424	0.658199	Yes
D'Agostino Omnibus	0.1974	0.905996	Yes
<b>Constant Residual Variance?</b>			
Modified Levene Test	2.8507	0.129813	No
<b>Relationship is a Straight Line?</b>			
Lack of Linear Fit F(0, 0) Test	0.0000	0.000000	No

#### No Serial Correlation?

Evaluate the Serial-Correlation report and the Durbin-Watson test if you have equal-spaced, time series data.

#### Notes:

A 'Yes' means there is not enough evidence to make this assumption seem unreasonable. This lack of evidence may be because the sample size is too small, the assumptions of the test itself are not met, or the assumption is valid.

A 'No' means the that the assumption is not reasonable. However, since these tests are related to sample size, you should assess the role of sample size in the tests by also evaluating the appropriate plots and graphs. A large dataset (say  $N > 500$ ) will often fail at least one of the normality tests because it is hard to find a large dataset that is perfectly normal.

#### Normality and Constant Residual Variance:

Possible remedies for the failure of these assumptions include using a transformation of Y such as the log or square root, correcting data-recording errors found by looking into outliers, adding additional independent variables, using robust regression, or using bootstrap methods.

#### Straight-Line:

Possible remedies for the failure of this assumption include using nonlinear regression or polynomial regression.
